

Sustainability:

Meeting the needs of the present without compromising the ability of future generations to meet their own needs.

Using Waste Oil to Make Biodiesel

SUNY-ESF students are working with SUFS on a joint project to convert our vegetable oil waste from Sadler Dining Center into biodiesel fuel. A third of the ESF fleet runs on some form of alternative fuel. This biodiesel fuel produces 70 percent less emissions than petroleum diesel. While this started as a student project, it has grown into much more than that. The student who has started this project has traveled all over the world to share his project results. SUFS is proud to be a part of this project and will continue to support the biodiesel project at SUNY-ESF.
